

ServiceDesk Simulator

Help Desk Projects

Six hands-on incidents resolved through remote support, documentation, secure access workflows, and clear ticket closure.

A driver update restored the second monitor

ISSUE

After an overnight update, the user's second monitor remained black and Windows detected only one display.

ACTIONS

- Connected to the workstation through remote support.
- Installed BIOS, graphics, firmware, power-management, and device-driver updates.
- Restarted the PC and documented the resolution.

OUTCOME

The second display returned and the ticket was closed.

Correct time zone restored meeting accuracy

ISSUE

A remote sales user's PC was set to Eastern Time instead of Central, causing missed meetings and incorrect timestamps.

ACTIONS

- Connected remotely and opened Date & Time settings.
- Changed the workstation from Eastern to Central Time.
- Verified the corrected clock and documented closure.

OUTCOME

Meeting times and file timestamps displayed correctly again.

Documented IP restored network printing

ISSUE

A remote engineering user could not print because the network printer was configured with the wrong IP address.

ACTIONS

- Checked the knowledge base for Floor3-Printer-C.
- Confirmed the correct address: 10.0.2.52.
- Replaced the incorrect configuration and ran a test print.

OUTCOME

The test page printed successfully and access was restored.

Secure reset restored access at first login

SECURE WORKFLOW

Verify identity
Reset temporary credential
Require change at first login

ISSUE

An expired password prevented a lead developer from signing in to a time-sensitive development environment.

ACTIONS

- Located the account in directory tools and sent a one-time verification code.
- Reset the expired password after identity verification.
- Shared the temporary credential through Team Chat and required a change at first login.

OUTCOME

The user regained access through a verified and secure handoff.

DNS flush and reboot restored the VPN tunnel

ISSUE

A remote employee lost VPN access and could no longer reach internal resources.

ACTIONS

- Connected through remote support and opened Terminal.
- Ran `ipconfig /flushdns`, restarted the workstation, and re-established the authenticated session.
- Reconnected the VPN client and verified the tunnel returned online.

OUTCOME

Secure access to internal resources was restored.

Resolved

VPN DISCONNECTED AND WON'T RECONNECT

Reported by: Lisa Martinez (lmartinez@servicedesk-simulator.com)
Department: Customer Support | Location: Remote (Working from home)
Contact: x2310

Issue Description:
VPN disconnected and won't reconnect

Business Impact:
Working remotely and lost VPN. Cannot access any internal resources.

KEY COMMAND

`ipconfig /flushdns`

`Reboot | reconnect | verify`

VPN and UNC mapping restored shared-drive access

INC0012847 HIGH

CANNOT GET TO MY FILES ON THE SHARED DRIVE ANYMORE

Reported by: Sarah Mitchell (smitchell@servicedesk-simulator.com)
Department: Marketing | Location: Remote (Working from home)
Contact: x4892

Issue Description:
I can't get to my files on the Marketing shared drive today. I keep getting "The network path was not found" when I try to open it. I'm working from home today. My internet and email both work fine.

Troubleshooting performed by user:
- Restarted my computer (no change)
- Internet and email work normally
- The mapped drives say disconnected

Business Impact:
Unable to access marketing campaign files. Deadline for Q1 campaign materials is EOD tomorrow.

ISSUE

A remote Marketing user received 'network path not found' while email and internet access continued to work.

ACTIONS

- Reconnected the VPN client to restore the internal network path.
- Used file-server documentation to locate the approved Marketing UNC path.
- Mapped the share as drive D: and confirmed the files opened.

RESTORED PATH

VPN connected
Marketing UNC path mapped to D:
Files opened successfully

OUTCOME

The Marketing shared drive was available before the campaign deadline.
